2005-2007

Stockholm International School
2009-2011

Western Academy of Beijing
2011-2012

International School of the Stockholm Region
2012-2017

IMC University of Applied Sciences BSc
2022-2026

OBJECTIVE

Furthering my knowledge in Data Science, Machine Learning, Web Development, Artificial Intelligence and other areas within the IT and programming scope.

Currently I am looking for a working student position as I am eager to gain more experience.

PROFILE

Digital native currently studying Informatics in Krems, Austria, set to graduate in 2026 with a Bachelor of Science. I grew up in Malaysia and China, before moving back to Sweden for high school. I speak English and Swedish fluently, Spanish at a proficient level, and am actively developing my German skills. I am currently in the midst of collaborative Python projects involving Cryptography, NLP (Natural Language Processing), Web Development with Django to learn more about these areas.

WORK EXPERIENCE

PRAO (Practical Work Life Orientation)
Folket Stockholm

As part of a high school program to involve students in a work environment, I was given experience with office tasks and insight into the advertising business, as well as the ideation process for creating commercials.

Service Staff
Göteborg Restaurant

Various areas of responsibility: waiting on tables, upkeep of food stock, bartending, I was in charge of venue-wide decoration as well as overview and upkeep of the Christmas smorgasbord (Julbord) during the latewinter season.

Bouncer
Temple Bar, Secret Garden, After Café Bar & Kitchen

Handling interactions with customers, conflict management, cleaning and setting up of the bar venues and restaurants were the responsibilities at this job. I was able to develop critical communication skills and patience.

Tech Support Agent
Teleperformance

Received training for troubleshooting iOS-related technologies and products, among other areas. In this customer service role, English was used to log cases in the internal CMS, while communication with customers was primarily in Swedish. The role was in the Chat Support department, but phone calls were needed often in the cases. This meant that I often dealt with more than 1 customer at a time (with up to 5 at a time being the limit) and thus had to have excellent typing, time and task management abilities, and adaptability.

PROJECTS

- Node.js CRUD Application
  - Created with the Express application to implement CRUD operations that could be performed with User Data. The application was built with the MVC (Model, View, Controller) structure in mind.
